FOREWORD

Scope of Investigation

This report presents estimates, as of January 1, 2017, of the extent and value of the proved oil, condensate, natural gas liquids (NGL), and gas reserves of certain properties in which Sabine Royalty Trust (the Trust) has represented that it owns an interest. The properties evaluated consist of royalty interests in wells located in Florida, Louisiana, Mississippi, New Mexico, Oklahoma, and Texas and are listed in detail in the appendices to this report.

Estimates of proved reserves presented in this report have been prepared in compliance with the regulations promulgated by the United States Securities and Exchange Commission (SEC). These reserves definitions are discussed in detail in the Definition of Reserves section of this report.

Reserves estimated in this report are expressed as gross and net reserves. Gross reserves are defined as the total estimated petroleum remaining to be produced from these properties after December 31, 2016. Net reserves are defined as that portion of the gross reserves attributable to the interests owned by the Trust after deducting royalties and interests owned by others.

This report presents values for proved reserves using prices and costs provided by Southwest Bank. No escalation has been applied to prices and expenses. Prices were estimated using guidelines established by the SEC and the Financial Accounting Standards Board (FASB). Prices were held

DEGOLYER AND MACNAUGHTON

constant for the lives of the properties. A detailed explanation of the future price assumptions is presented in the Valuation of Reserves section of this report.

Values of proved net reserves of the Trust in this report are expressed in terms of estimated future gross revenue, future net revenue, and present worth. Future gross revenue is defined as that revenue which will accrue to the evaluated interests from the production and sale of the estimated net reserves. Future net revenue is calculated by deducting estimated severance taxes, ad valorem taxes, and other expenses related to transportation and marketing from the future gross revenue. Future income taxes were not taken into account in the preparation of these estimates. Present worth is defined as future net revenue discounted at a specified arbitrary discount rate compounded monthly over the expected period of realization. Present worth should not be construed as fair market value because no consideration was given to additional factors that influence the prices at which properties are bought and sold. In this report, present worth values using a discount rate of 10 percent are reported in detail and values using discount rates of 5, 8, 12, 15, 20, 25, and 30 percent are reported as totals in the appendices.

Estimates of oil, condensate, NGL, and gas reserves and future net revenue should be regarded only as estimates that may change as further production history and additional information become available. Not only are such reserves and revenue estimates based on that information which is currently available, but such estimates are also subject to the uncertainties inherent in the application of judgmental factors in interpreting such information.

Authority

This report was prepared at the request of Mr. Ron E. Hooper, Senior Vice President–Trust, Southwest Bank.

Source of Information

Data used in the preparation of this report were obtained from Southwest Bank, from reports filed with the appropriate regulatory agencies, and from other public sources. Additionally, this information includes data supplied by IHS Global Inc.; Copyright 2017 IHS Global Inc. In the preparation of this report we have relied, without independent verification, upon information furnished by Southwest Bank with respect to property interests owned by the Trust, production from such properties, current costs of operation and development, current prices for production,

DEGOLYER AND MACNAUGHTON

agreements relating to current and future operations and sale of production, and various other information and data that were accepted as represented. A field examination of the properties was not considered necessary for the purposes of this report.

DEFINITION of RESERVES

Petroleum reserves included in this report are classified by degree of proof as proved. Only proved reserves have been evaluated for this report. Reserves classifications used in this report are in accordance with the reserves definitions of Rules 4–10(a) (1)–(32) of Regulation S–X of the SEC. Reserves are judged to be economically producible in future years from known reservoirs under existing economic and operating conditions and assuming continuation of current regulatory practices using conventional production methods and equipment. In the analyses of production-decline curves, reserves were estimated only to the limit of economic rates of production under existing economic and operating conditions using prices and costs consistent with the effective date of this report, including consideration of changes in existing prices provided only by contractual arrangements but not including escalations based upon future conditions. The petroleum reserves are classified as follows:

Proved oil and gas reserves – Proved oil and gas reserves are those quantities of oil and gas, which, by analysis of geoscience and engineering data, can be estimated with reasonable certainty to be economically producible—from a given date forward, from known reservoirs, and under existing economic conditions, operating methods, and government regulations—prior to the time at which contracts providing the right to operate expire, unless evidence indicates that renewal is reasonably certain, regardless of whether deterministic or probabilistic methods are used for the estimation. The project to extract the hydrocarbons must have commenced or the operator must be reasonably certain that it will commence the project within a reasonable time.

- (i) The area of the reservoir considered as proved includes:
 - (A) The area identified by drilling and limited by fluid contacts, if any, and (B) Adjacent undrilled portions of the reservoir that can, with reasonable certainty, be judged to be continuous with it and to contain economically producible oil or gas on the basis of available geoscience and engineering data.
 - (ii) In the absence of data on fluid contacts, proved quantities in a reservoir are limited by the lowest known hydrocarbons (LKH) as seen in a well penetration unless geoscience, engineering,

or performance data and reliable technology establishes a lower contact with reasonable certainty.

(iii) Where direct observation from well penetrations has defined a highest known oil (HKO) elevation and the potential exists for an associated gas cap, proved oil reserves may be assigned in the structurally higher portions of the reservoir only if geoscience, engineering, or performance data and reliable technology establish the higher contact with reasonable certainty.

(iv) Reserves which can be produced economically through application of improved recovery techniques (including, but not limited to, fluid injection) are included in the proved classification when:

(A) Successful testing by a pilot project in an area of the reservoir with properties no more favorable than in the reservoir as a whole, the operation of an installed program in the reservoir or an analogous reservoir, or other evidence using reliable technology establishes the reasonable certainty of the engineering analysis on which the project or program was based; and (B) The project has been approved for development by all necessary parties and entities, including governmental entities.

(v) Existing economic conditions include prices and costs at which economic producibility from a reservoir is to be determined. The price shall be the average price during the 12-month period prior to the ending date of the period covered by the report, determined as an unweighted arithmetic average of the first-day-of-the-month price for each month within such period, unless prices are defined by contractual arrangements, excluding escalations based upon future conditions.

Probable reserves – Probable reserves are those additional reserves that are less certain to be recovered than proved reserves but which, together with proved reserves, are as likely as not to be recovered.

(i) When deterministic methods are used, it is as likely as not that actual remaining quantities recovered will exceed the sum of estimated proved plus probable reserves. When probabilistic methods are used, there should be at least a 50% probability that

the actual quantities recovered will equal or exceed the proved plus probable reserves estimates.

(ii) Probable reserves may be assigned to areas of a reservoir adjacent to proved reserves where data control or interpretations of available data are less certain, even if the interpreted reservoir continuity of structure or productivity does not meet the reasonable certainty criterion. Probable reserves may be assigned to areas that are structurally higher than the proved area if these areas are in communication with the proved reservoir.

(iii) Probable reserves estimates also include potential incremental quantities associated with a greater percentage recovery of the hydrocarbons in place than assumed for proved reserves.

(iv) See also guidelines in paragraphs (iv) and (vi) of the definition of possible reserves.

Possible reserves – Possible reserves are those additional reserves that are less certain to be recovered than probable reserves.

(i) When deterministic methods are used, the total quantities ultimately recovered from a project have a low probability of exceeding proved plus probable plus possible reserves. When probabilistic methods are used, there should be at least a 10% probability that the total quantities ultimately recovered will equal or exceed the proved plus probable plus possible reserves estimates.

(ii) Possible reserves may be assigned to areas of a reservoir adjacent to probable reserves where data control and interpretations of available data are progressively less certain. Frequently, this will be in areas where geoscience and engineering data are unable to define clearly the area and vertical limits of commercial production from the reservoir by a defined project.

(iii) Possible reserves also include incremental quantities associated with a greater percentage recovery of the hydrocarbons

in place than the recovery quantities assumed for probable reserves.

(iv) The proved plus probable and proved plus probable plus possible reserves estimates must be based on reasonable alternative technical and commercial interpretations within the reservoir or subject project that are clearly documented, including comparisons to results in successful similar projects.

(v) Possible reserves may be assigned where geoscience and engineering data identify directly adjacent portions of a reservoir within the same accumulation that may be separated from proved areas by faults with displacement less than formation thickness or other geological discontinuities and that have not been penetrated by a wellbore, and the registrant believes that such adjacent portions are in communication with the known (proved) reservoir. Possible reserves may be assigned to areas that are structurally higher or lower than the proved area if these areas are in communication with the proved reservoir.

(vi) Pursuant to paragraph (iii) of the proved oil and gas reserves definition, where direct observation has defined a highest known oil (HKO) elevation and the potential exists for an associated gas cap, proved oil reserves should be assigned in the structurally higher portions of the reservoir above the HKO only if the higher contact can be established with reasonable certainty through reliable technology. Portions of the reservoir that do not meet this reasonable certainty criterion may be assigned as probable and possible oil or gas based on reservoir fluid properties and pressure gradient interpretations.

Developed oil and gas reserves – Developed oil and gas reserves are reserves of any category that can be expected to be recovered:

(i) Through existing wells with existing equipment and operating methods or in which the cost of the required equipment is relatively minor compared to the cost of a new well; and

- (ii) Through installed extraction equipment and infrastructure operational at the time of the reserves estimate if the extraction is by means not involving a well.

Undeveloped oil and gas reserves – Undeveloped oil and gas reserves are reserves of any category that are expected to be recovered from new wells on undrilled acreage, or from existing wells where a relatively major expenditure is required for recompletion.

- (i) Reserves on undrilled acreage shall be limited to those directly offsetting development spacing areas that are reasonably certain of production when drilled, unless evidence using reliable technology exists that establishes reasonable certainty of economic producibility at greater distances.
- (ii) Undrilled locations can be classified as having undeveloped reserves only if a development plan has been adopted indicating that they are scheduled to be drilled within five years, unless the specific circumstances justify a longer time.
- (iii) Under no circumstances shall estimates for undeveloped reserves be attributable to any acreage for which an application of fluid injection or other improved recovery technique is contemplated, unless such techniques have been proved effective by actual projects in the same reservoir or an analogous reservoir, as defined in [section 210.4–10 (a) Definitions], or by other evidence using reliable technology establishing reasonable certainty.

The extent to which probable and possible reserves ultimately may be reclassified as proved reserves is dependent upon future drilling, testing, and well performance. The degree of risk to be applied in evaluating probable and possible reserves is influenced by economic and technological factors as well as the time element. No probable or possible reserves have been evaluated for this report.

ESTIMATION of RESERVES

Estimates of reserves were prepared by the use of appropriate geologic, petroleum engineering, and evaluation principles and techniques that are in accordance with practices generally recognized by the petroleum industry as presented in the publication of the Society of Petroleum Engineers entitled "Standards Pertaining to the Estimating and Auditing of Oil and Gas Reserves Information (Revision as of February 19, 2007)." The method or combination of methods used in the analysis of each reservoir was tempered by experience with similar reservoirs, stage of development, quality and completeness of basic data, and production history.

Based on the current stage of field development, production performance, the development plans provided by the Trust, and the analyses of areas offsetting existing wells with test or production data, reserves were classified as proved.

An analysis of reservoir performance, including production rate, reservoir pressure, and gas-oil ratio behavior, was used in the estimation of reserves. For depletion-type reservoirs or those whose performance disclosed a reliable decline in producing-rate trends or other diagnostic characteristics, reserves were estimated by the application of appropriate decline curves or other performance relationships. In the analyses of production decline curves, reserves were estimated only to the limits of economic production. Because the Trust is unable to provide actual operating expenses for the properties evaluated (since the Trust's interests are only royalty interests), typical operating expenses, based on our knowledge of the area and/or field operations, were used to determine the economic limits of production.

In certain cases, when the previously named methods could not be used, reserves were estimated by analogy with similar wells or reservoirs for which more complete data were available.

The development status shown herein represents the status applicable on January 1, 2017. In the preparation of this report, data available from wells drilled on the evaluated properties through October 31, 2016, were used in estimating gross ultimate recovery. When applicable, gross production estimated to January 1, 2017, was deducted from gross ultimate recovery to arrive at the estimates of gross reserves as of January 1, 2017. In some

DEGOLYER AND MACNAUGHTON

fields, this required that the production rates be estimated for up to 2 months, since production data were available only through October 2016.

Gas reserves estimated herein are expressed as gross gas and sales gas. Wet gas is defined as the indigenous gas in the reservoir to be produced after January 1, 2017. Separator gas is the gas remaining after field separation but prior to gas processing and shrinkage for fuel use or flare. Sales gas is defined as the total gas to be produced from the reservoirs, measured at the point of delivery, after reduction for fuel usage and shrinkage resulting from field separation and plant processing. For properties located in Texas, gross gas quantities for gas wells are reported as wet gas. For all other properties, gross gas quantities are reported as separator gas. The estimated gross gas reserves are presented in the appendices to this report. Net gas reserves are reported as sales gas. All gas quantities are expressed at a temperature base of 60 degrees Fahrenheit and at the pressure base of the state in which the interest is located. Gas reserves estimates included in the appendices to this report are expressed in thousands of cubic feet (Mcf).

Oil and condensate reserves estimated herein are those to be recovered by conventional lease separation. NGL reserves are those attributable to the lease or plant interest evaluated based on processing agreements. Oil, condensate, and NGL reserves estimates included in the appendices to this report are expressed in terms of barrels representing 42 United States gallons per barrel. For reporting purposes, oil, condensate, and NGL reserves have been estimated separately and are presented herein as a summed quantity.

The Trust has represented that it owns several thousand individual royalty interests. In view of the small reserves volumes attributable to many of these individual interests, certain of the reserves representing approximately 27 percent of the total net reserves of the properties included herein were summarized by state or area and estimated in the aggregate rather than on a property-by-property basis. Historical records of net production and revenue and our general knowledge of producing characteristics in the areas involved were used in evaluating these grouped properties.

Undeveloped reserves were estimated for certain properties based on industry activity on and adjacent to these certain properties as well as other public knowledge concerning the future development of certain properties. Typical drilling capital costs, operating expenses, and abandonment costs in these areas were used to validate that the undeveloped

DEGOLYER AND MACNAUGHTON

reserves are economic. These undeveloped reserves represent only 4 percent of the total net reserves evaluated herein.

Our estimates of the Trust's net proved reserves, as of January 1, 2017, attributable to the reviewed properties were based on the definitions of proved reserves of the SEC and are summarized by state as follows, expressed in thousands of barrels (Mbbl) and millions of cubic feet (MMcf):

State	Proved Developed		Proved Undeveloped		Total Proved	
	Oil, Condensate, and NGL* (Mbbl)	Sales Gas (MMcf)	Oil, Condensate, and NGL* (Mbbl)	Sales Gas (MMcf)	Oil, Condensate, and NGL (Mbbl)	Sales Gas (MMcf)
Florida	51	0	0	0	51	0
Louisiana	54	444	0	0	54	444
Mississippi	104	501	16	0	120	501
New Mexico	380	1,868	0	0	380	1,868
Oklahoma	597	9,421	0	0	597	9,421
Texas	4,813	20,611	5	2,772	4,818	23,383
Total	5,999	32,845	21	2,772	6,020	35,617

* Includes total net NGL reserves of 1,702 Mbbl proved developed and 0 Mbbl proved undeveloped.

VALUATION of RESERVES

Revenue values in this report were estimated using the prices and costs provided by Southwest Bank. Future prices were estimated using guidelines established by the SEC and the (FASB). The following assumptions were used for estimating future prices and costs:

Oil, Condensate, NGL, and Gas Prices

Oil, condensate, NGL, and gas prices were based on a reference price, calculated as the unweighted arithmetic average of the first-day-of-the-month price for each month within the 12-month period prior to the end of the reporting period. A West Texas Intermediate oil reference price of \$42.60 per barrel and a Henry Hub gas reference price of \$2.50 per million British thermal units were used for this evaluation. The prices were held constant thereafter and were not escalated for inflation.

Based on royalty receipts received by the Trust, as provided by Southwest Bank, various oil, condensate, NGL, and gas price differentials based on product quality and property location were determined for each property. These differentials were then applied to the above reference prices, respectively, to reflect the net wellhead prices anticipated to be received by each property.

The volume-weighted average prices attributable to estimated proved reserves over the lives of the properties were \$39.34 per barrel of oil and condensate, \$2.422 per thousand cubic feet of gas, and \$11.66 per barrel of NGL.

Operating Expenses, Capital Costs, and Abandonment Costs

The properties evaluated are royalties. Therefore, no operating expenses, capital costs, or abandonment costs are incurred. Because the Trust is unable to provide actual operating expenses for the properties evaluated, typical operating expenses, based on our knowledge of the area and/or field operations, were used to determine the economic limits of production. For undeveloped reserves, typical drilling capital

DEGOLYER AND MACNAUGHTON

costs, operating expenses, and abandonment costs in these areas were used to validate that the undeveloped reserves are economic.

The expenses reported are primarily severance taxes and ad valorem taxes, which were based on historical tax rates furnished by Southwest Bank. Several properties incur additional expenses related to transportation, marketing, and/or other expenses that are charged to the royalty interests. These expenses are reported as transportation expenses. No escalation has been applied to the expenses.

The estimated future revenue and costs to be derived from the production and sale of the net proved reserves, as of January 1, 2017, of the properties evaluated are summarized as follows, expressed in thousands of dollars (M\$):

	Proved		
	Developed (M\$)	Undeveloped (M\$)	Total (M\$)
Future Gross Revenue, M\$	268,216	7,792	276,008
Severence Taxes, M\$	12,836	324	13,160
Ad Valorem Taxes, M\$	9,523	338	9,861
Transportation Costs, M\$	13,732	890	14,622
Future Net Revenue, M\$	232,124	6,241	238,365
Present Worth at 10 Percent, M\$	118,046	3,038	121,084

Note: Future income tax expenses were not taken into account in the preparation of these estimates.

In our opinion, the information relating to estimated oil, condensate, NGL, and gas reserves, estimated future net revenue from proved reserves, and present worth of estimated future net revenue from proved reserves of oil, condensate, natural gas liquids (NGL), and gas contained in this report has been prepared in accordance with Paragraphs 932-235-50-4, 932-235-50-6, 932-235-50-7, 932-235-50-9, 932-235-50-30, and 932-235-50-31(a), (b), and (e) of the Accounting Standards Update 932-235-50, *Extractive Industries – Oil and Gas (Topic 932): Oil and Gas Reserve Estimation and Disclosures* (January 2010) of the Financial Accounting Standards Board and Rules 4-10(a) (1)-(32) of Regulation S-X and Rules 302(b), 1201, 1202(a) (1), (2), (3), (4), (8)(i), (ii), and (v)-(x), and 1203(a) of Regulation S-K of the Securities and Exchange Commission; provided, however, that (i) future income tax expenses have not been taken into account in estimating the future net revenue and present worth values set forth herein and (ii) estimates

DEGOLYER AND MACNAUGHTON

of the proved developed and proved undeveloped reserves are not presented at the beginning of the year.

To the extent the above-enumerated rules, regulations, and statements require determinations of an accounting or legal nature, we, as engineers, are necessarily unable to express an opinion as to whether the above-described information is in accordance therewith or sufficient therefor.

Appendix A, bound with this report, contains the following: (1) summary projections of estimated annual production and revenue by reserves category and state, (2) tabulations of gross and net reserves and revenue by lease with summaries by reserves category, state, and field, and (3) rankings by field and lease of reserves and revenue. The separately bound Appendix B contains projections of estimated annual production and revenue by lease, with summaries by reserves category, state, and field.

DEGOLYER AND MACNAUGHTON

SUMMARY and CONCLUSIONS

The Trust has represented that it owns interests in certain royalty interests in the United States. The estimated net proved reserves of the properties evaluated, as of January 1, 2017, are summarized as follows, expressed in thousands of barrels (Mbbl) and millions of cubic feet (MMcf):

	Proved		
	Developed	Undeveloped	Total
Oil and Condensate, Mbbl	4,297	21	4,318
NGL, Mbbl	1,702	0	1,702
Total Liquids, Mbbl	5,999	21	6,020
Sale Gas, MMcf	32,845	2,772	35,617

Under the aforementioned assumptions concerning prices and expenses, the estimated future net revenue to be derived from the production and sale of the Trust-owned net proved reserves, as of January 1, 2017, of the properties evaluated is summarized as follows, expressed in thousands of dollars (M\$):

	Proved		
	Developed (M\$)	Undeveloped (M\$)	Total (M\$)
Future Net Revenue, M\$	232,124	6,241	238,365
Present Worth at 10 Percent, M\$	118,046	3,038	121,084

Note: Future income tax expenses were not taken into account in the preparation of these estimates.

While the oil and gas industry may be subject to regulatory changes from time to time that could affect an industry participant's ability to recover its oil and gas reserves, we are not aware of any such governmental actions which would restrict the recovery of the January 1, 2017, estimated oil and gas reserves.

DEGOLYER AND MACNAUGHTON

DeGolyer and MacNaughton is an independent petroleum engineering consulting firm that has been providing petroleum consulting services throughout the world since 1936. Our fees were not contingent on the results of our evaluation. This report has been prepared at the request of the Trust. DeGolyer and MacNaughton has used all assumptions, procedures, data, and methods that it considers necessary to prepare this report.

Submitted,
