on
RESERVES and REVENUE
of
CERTAIN PROPERTIES
with royalty interests attributable to
SABINE ROYALTY TRUST

FOREWORD

Scope of Investigation

This report presents estimates, as of December 31, 2023, of the extent and value of the proved developed producing oil, condensate, natural gas liquids (NGL), and gas reserves of certain properties in which Sabine Royalty Trust (the Trust) has represented it holds an interest. The properties evaluated herein consist of royalties located in Florida, Louisiana, Mississippi, New Mexico, Oklahoma, and Texas. A list of the properties evaluated in this report is shown in Appendix A to this report under the Data on Reserves and Revenue tab.

Estimates of reserves presented in this report have been prepared in compliance with the regulations promulgated by the United States Securities and Exchange Commission (SEC). These reserves definitions are discussed in detail in the Definition of Reserves section of this report.

Reserves estimated in this report are expressed as gross reserves and net reserves. Gross reserves are defined as the total estimated petroleum remaining to be produced from these properties after December 31, 2023. Net reserves are defined as that portion of the gross reserves attributable to the interests held by the Trust after deducting all interests held by others.

This report presents values for proved developed producing reserves that were estimated using prices, expenses, and costs provided by Argent Trust Company, the trustee for the Trust. Future prices were

estimated using guidelines established by the SEC and the Financial Accounting Standards Board (FASB). A detailed explanation of the future price, expense, and cost assumptions is included in the Valuation of Reserves section of this report.

Values for proved developed producing reserves in this report are expressed in terms of future gross revenue, future net revenue, and present worth. Future gross revenue is defined as that revenue which will accrue to the evaluated interests from the production and sale of the estimated net reserves. Future net revenue is calculated by deducting production taxes, ad valorem taxes, and transportation expenses from future gross revenue. Transportation expenses include marketing, processing, and other expenses that are charged to the royalty interests. At the request of the Trust, future income taxes were not taken into account in the preparation of these estimates. Present worth is defined as future net revenue discounted at a specified arbitrary discount rate compounded monthly over the expected period of realization. Present worth should not be construed as fair market value because no consideration was given to additional factors that influence the prices at which properties are bought and sold. In this report, present worth values using a discount rate of 10 percent are reported in detail and values using discount rates of 5, 8, 12, 15, 20, 25, and 30 percent are reported as totals in the appendices to this report.

Estimates of reserves and revenue should be regarded only as estimates that may change as further production history and additional information become available. Not only are such estimates based on that information which is currently available, but such estimates are also subject to the uncertainties inherent in the application of judgmental factors in interpreting such information.

Authority

Officer, Argent Trust Company.

This report was authorized by Mr. Chris Holtzclaw, Chief Fiduciary

Source of Information

Trust from Argent Trust Company and from public sources. Additionally, this information includes data supplied by S&P Global; Copyright 2023 S&P Global. In the preparation of this report we have relied, without independent verification, upon information furnished by Argent Trust Company with respect to the property

Information used in the preparation of this report was obtained on behalf of the

DEGOLYER AND MACNAUGHTON

interests being evaluated, production from such properties, current costs of operation and development, current prices for production, agreements relating to current and future operations and sale of production, and various other information and data that were accepted as represented. A field examination was not considered necessary for the purposes of this report.

DEFINITION of RESERVES

Petroleum reserves included in this report are classified as proved developed producing. Only proved developed producing reserves have been evaluated for this report. Reserves classifications used in this report are in accordance with the reserves definitions of Rules 4–10(a) (1)–(32) of Regulation S–X of the SEC. Reserves are judged to be economically producible in future years from known reservoirs under existing economic and operating conditions and assuming continuation of current regulatory practices using conventional production methods and equipment. In the analyses of production-decline curves, reserves were estimated only to the limit of economic rates of production under existing economic and operating conditions using prices and costs consistent with the effective date of this report, including consideration of changes in existing prices provided only by contractual arrangements but not including escalations based upon future conditions. The petroleum reserves are classified as follows:

Proved oil and gas reserves – Proved oil and gas reserves are those quantities of oil and gas, which, by analysis of geoscience and engineering data, can be estimated with reasonable certainty to be economically producible—from a given date forward, from known reservoirs, and under existing economic conditions, operating methods, and government regulations—prior to the time at which contracts providing the right to operate expire, unless evidence indicates that renewal is reasonably certain, regardless of whether deterministic or probabilistic methods are used for the estimation. The project to extract the hydrocarbons must have commenced or the operator must be reasonably certain that it will commence the project within a reasonable time.

- (i) The area of the reservoir considered as proved includes:
 - (A) The area identified by drilling and limited by fluid contacts, if any, and (B) Adjacent undrilled portions of the reservoir that can, with reasonable certainty, be judged to be continuous with it and to contain economically producible oil or gas on the basis of available geoscience and engineering data.

- (ii) In the absence of data on fluid contacts, proved quantities in a reservoir are limited by the lowest known hydrocarbons (LKH) as seen in a well penetration unless geoscience,

engineering, or performance data and reliable technology establishes a lower contact with reasonable certainty.

(iii) Where direct observation from well penetrations has defined a highest known oil (HKO) elevation and the potential exists for an associated gas cap, proved oil reserves may be assigned in the structurally higher portions of the reservoir only if geoscience, engineering, or performance data and reliable technology establish the higher contact with reasonable certainty.

(iv) Reserves which can be produced economically through application of improved recovery techniques (including, but not limited to, fluid injection) are included in the proved classification when:

(A) Successful testing by a pilot project in an area of the reservoir with properties no more favorable than in the reservoir as a whole, the operation of an installed program in the reservoir or an analogous reservoir, or other evidence using reliable technology establishes the reasonable certainty of the engineering analysis on which the project or program was based; and (B) The project has been approved for development by all necessary parties and entities, including governmental entities.

(v) Existing economic conditions include prices and costs at which economic producibility from a reservoir is to be determined. The price shall be the average price during the 12-month period prior to the ending date of the period covered by the report, determined as an unweighted arithmetic average of the first-day-of-the-month price for each month within such period, unless prices are defined by contractual arrangements, excluding escalations based upon future conditions.

Probable reserves – Probable reserves are those additional reserves that are less certain to be recovered than proved reserves but which, together with proved reserves, are as likely as not to be recovered.

(i) When deterministic methods are used, it is as likely as not that actual remaining quantities recovered will exceed the sum

of estimated proved plus probable reserves. When probabilistic methods are used, there should be at least a 50% probability that the actual quantities recovered will equal or exceed the proved plus probable reserves estimates.

(ii) Probable reserves may be assigned to areas of a reservoir adjacent to proved reserves where data control or interpretations of available data are less certain, even if the interpreted reservoir continuity of structure or productivity does not meet the reasonable certainty criterion. Probable reserves may be assigned to areas that are structurally higher than the proved area if these areas are in communication with the proved reservoir.

(iii) Probable reserves estimates also include potential incremental quantities associated with a greater percentage recovery of the hydrocarbons in place than assumed for proved reserves.

(iv) See also guidelines in paragraphs (iv) and (vi) of the definition of possible reserves.

Possible reserves – Possible reserves are those additional reserves that are less certain to be recovered than probable reserves.

(i) When deterministic methods are used, the total quantities ultimately recovered from a project have a low probability of exceeding proved plus probable plus possible reserves. When probabilistic methods are used, there should be at least a 10% probability that the total quantities ultimately recovered will equal or exceed the proved plus probable plus possible reserves estimates.

(ii) Possible reserves may be assigned to areas of a reservoir adjacent to probable reserves where data control and interpretations of available data are progressively less certain. Frequently, this will be in areas where geoscience and engineering data are unable to define clearly the area and vertical limits of commercial production from the reservoir by a defined project.

(iii) Possible reserves also include incremental quantities associated with a greater percentage recovery of the hydrocarbons in place than the recovery quantities assumed for probable reserves.

(iv) The proved plus probable and proved plus probable plus possible reserves estimates must be based on reasonable alternative technical and commercial interpretations within the reservoir or subject project that are clearly documented, including comparisons to results in successful similar projects.

(v) Possible reserves may be assigned where geoscience and engineering data identify directly adjacent portions of a reservoir within the same accumulation that may be separated from proved areas by faults with displacement less than formation thickness or other geological discontinuities and that have not been penetrated by a wellbore, and the registrant believes that such adjacent portions are in communication with the known (proved) reservoir. Possible reserves may be assigned to areas that are structurally higher or lower than the proved area if these areas are in communication with the proved reservoir.

(vi) Pursuant to paragraph (iii) of the proved oil and gas reserves definition, where direct observation has defined a highest known oil (HKO) elevation and the potential exists for an associated gas cap, proved oil reserves should be assigned in the structurally higher portions of the reservoir above the HKO only if the higher contact can be established with reasonable certainty through reliable technology. Portions of the reservoir that do not meet this reasonable certainty criterion may be assigned as probable and possible oil or gas based on reservoir fluid properties and pressure gradient interpretations.

Developed oil and gas reserves – Developed oil and gas reserves are reserves of any category that can be expected to be recovered:

(i) Through existing wells with existing equipment and operating methods or in which the cost of the required

equipment is relatively minor compared to the cost of a new well; and

(ii) Through installed extraction equipment and infrastructure operational at the time of the reserves estimate if the extraction is by means not involving a well.

Undeveloped oil and gas reserves – Undeveloped oil and gas reserves are reserves of any category that are expected to be recovered from new wells on undrilled acreage, or from existing wells where a relatively major expenditure is required for recompletion.

(i) Reserves on undrilled acreage shall be limited to those directly offsetting development spacing areas that are reasonably certain of production when drilled, unless evidence using reliable technology exists that establishes reasonable certainty of economic producibility at greater distances.

(ii) Undrilled locations can be classified as having undeveloped reserves only if a development plan has been adopted indicating that they are scheduled to be drilled within five years, unless the specific circumstances justify a longer time.

(iii) Under no circumstances shall estimates for undeveloped reserves be attributable to any acreage for which an application of fluid injection or other improved recovery technique is contemplated, unless such techniques have been proved effective by actual projects in the same reservoir or an analogous reservoir, as defined in [section 210.4–10 (a) Definitions], or by other evidence using reliable technology establishing reasonable certainty.

The extent to which probable and possible reserves ultimately may be reclassified as proved reserves is dependent upon future drilling, testing, and well performance. The degree of risk to be applied in evaluating probable and possible reserves is influenced by economic and technological factors as well as the time element. No probable or possible reserves have been evaluated for this report.

ESTIMATION of RESERVES

Estimates of reserves were prepared by the use of appropriate geologic, petroleum engineering, and evaluation principles and techniques that are in accordance with the reserves definitions of Rules 4–10(a) (1)–(32) of Regulation S–X of the SEC and with practices generally recognized by the petroleum industry as presented in the publication of the Society of Petroleum Engineers entitled “Standards Pertaining to the Estimating and Auditing of Oil and Gas Reserves Information (revised June 2019) Approved by the SPE Board on 25 June 2019.” The method or combination of methods used in the analysis of each reservoir was tempered by experience with similar reservoirs, stage of development, quality and completeness of basic data, and production history.

Based on the current stage of field development, production performance, the development plans provided by the Trust, and analyses of areas offsetting existing wells with test or production data, reserves were classified as proved developed producing.

For depletion-type reservoirs or those whose performance disclosed a reliable decline in producing-rate trends or other diagnostic characteristics, reserves were estimated by the application of appropriate decline curves or other performance relationships. In the analyses of production-decline curves, reserves were estimated only to the limits of economic production as defined in the Definition of Reserves section of this report. Because the Trust is unable to provide actual operating expenses for the properties evaluated (since the Trust’s interests are only royalty interests), typical operating expenses, based on our knowledge of the area and/or field operations, were used to determine the economic limits of production.

In certain cases, reserves were estimated by incorporating elements of analogy with similar wells or reservoirs for which more complete data were available.

Data provided by the Trust from wells drilled through October 31, 2023, and made available for this evaluation were used to prepare the reserves estimates herein. These reserves estimates were based on consideration of monthly production data available for certain properties only through October 2023. Estimated cumulative production, as of December 31, 2023, was deducted from the estimated gross ultimate recovery to estimate gross reserves. This required that production be estimated for up to 2 months.

Oil and condensate reserves estimated herein are to be recovered by normal field separation. NGL reserves estimated herein include pentanes and heavier fractions (C₅₊) and liquefied petroleum gas (LPG), which consists primarily of propane and butane fractions, and are the result of low-temperature plant processing. Oil, condensate, and NGL reserves included in the appendices to this report are expressed in barrels (bbl). In these estimates, 1 barrel equals 42 United States gallons. For reporting purposes, oil and condensate reserves have been estimated separately and are presented herein as a summed quantity.

Gas quantities estimated herein are expressed as separator gas and sales gas. Separator gas is defined as the gas remaining after field separation but prior to gas processing and shrinkage for fuel use or flare. Sales gas is defined as the total gas to be produced from the reservoirs, measured at the point of delivery, after reduction for fuel usage, flare, and shrinkage resulting from field separation and processing. Gas reserves estimated herein are reported as sales gas. Gross gas quantities are shown as separator gas and sales gas in the appendices to this report. Gas quantities are expressed at a temperature base of 60 degrees Fahrenheit (°F) and at the pressure base of the state in which the quantities are located. Gas quantities included in the appendices to this report are expressed in thousands of cubic feet (Mcf).

Gas quantities are identified by the type of reservoir from which the gas will be produced. Nonassociated gas is gas at initial reservoir conditions with no oil present in the reservoir. Associated gas is both gas-cap gas and solution gas. Gas-cap gas is gas at initial reservoir conditions and is in communication with an underlying oil zone. Solution gas is gas dissolved in oil at initial reservoir conditions. Gas quantities estimated herein include both associated and nonassociated gas.

The Trust has represented that it holds several thousand individual royalty interests. In view of the small reserves volumes attributable to many of these individual interests, certain of the reserves representing approximately 39 percent of the total net reserves of the properties included herein were summarized by state or area and estimated in the aggregate rather than on a property-by-property basis. Historical records of net production and revenue and our general knowledge of producing characteristics in the areas involved were used in evaluating these grouped properties.

DEGOLYER AND MACNAUGHTON

Future oil and gas producing rates estimated for this report were based on production rates considering the most recent data available. The rates used for future production have been estimated to be within the capacity of a well or reservoir to produce.

The estimated gross and net proved developed producing reserves, as of December 31, 2023, of the properties evaluated herein are summarized by state as follows, expressed in thousands of barrels (Mbbbl) and millions of cubic feet (MMcf):

| State | Gross Reserves | | | Net Reserves | | | |
|--------------|----------------------------------|----------------|------------------------|----------------------------------|----------------|-----------------------------|------------------------|
| | Oil and Condensate (Mbbbl) | NGL (Mbbbl) | Sales Gas (MMcf) | Oil and Condensate (Mbbbl) | NGL (Mbbbl) | Total Liquids (Mbbbl) | Sales Gas (MMcf) |
| Florida | 7,289 | 713 | 0 | 35 | 3 | 38 | 0 |
| Louisiana | 808 | 56 | 4,142 | 34 | 5 | 40 | 111 |
| Mississippi | 17,297 | 75 | 33,714 | 77 | 0 | 77 | 369 |
| New Mexico | 86,216 | 73,300 | 80,508 | 222 | 114 | 336 | 969 |
| Oklahoma | 36,682 | 9,039 | 202,641 | 636 | 355 | 990 | 11,541 |
| Texas | 717,568 | 204,799 | 510,632 | 4,310 | 2,124 | 6,434 | 33,409 |
| Total | 865,860 | 287,982 | 831,637 | 5,314 | 2,601 | 7,915 | 46,399 |

VALUATION of RESERVES

Revenue values in this report were estimated using initial prices, expenses, and costs provided by Argent Trust Company. Future prices were estimated using guidelines established by the SEC and the FASB.

The following economic assumptions were used for estimating the revenue values reported herein:

Oil, Condensate, and NGL Prices

The oil, condensate, and NGL prices were based on a reference price, calculated as the unweighted arithmetic average of the first-day-of-the-month price for each month within the 12-month period prior to the end of the reporting period, unless prices are defined by contractual agreements. Differentials to a West Texas Intermediate oil reference price of \$78.21 per barrel were based on royalty receipts received by the Trust, as provided by Argent Trust Company. The prices were held constant thereafter. The volume-weighted average prices attributable to the estimated proved developed producing reserves over the lives of the properties were \$77.86 per barrel of oil and condensate and \$26.72 per barrel of NGL.

Gas Prices

The gas prices were based on a reference price, calculated as the unweighted arithmetic average of the first-day-of-the-month price for each month within the 12-month period prior to the end of the reporting period, unless prices are defined by contractual agreements. Differentials to the Henry Hub gas reference price of \$2.63 per million Btu were based on royalty receipts received by the Trust, as provided by Argent Trust Company. The prices were held constant thereafter. Btu factors provided by Argent Trust Company were used to convert prices from dollars per million Btu to dollars per thousand cubic feet. The volume-weighted average price attributable to the estimated proved developed producing reserves over the lives of the properties was \$2.361 per thousand cubic feet of gas.

Production and Ad Valorem Taxes

Production taxes were calculated using rates provided by Argent Trust Company, including, where appropriate, abatements for enhanced recovery programs. Ad valorem taxes were calculated using rates provided by Argent Trust Company based on recent payments by the Trust.

Operating Expenses, Capital Costs, and Abandonment Costs

The properties evaluated are royalties. Therefore, no operating expenses, capital costs, or abandonment costs are incurred. Because the Trust is unable to provide actual operating expenses for the properties evaluated, typical operating expenses, based on our knowledge of the area and/or field operations, were used to determine the economic limits of production. Several properties incur additional expenses related to transportation, marketing, processing and other expenses that are charged to the royalty interests. These expenses are reported herein as transportation expenses. These expenses were not adjusted for inflation. Certain properties have been included herein that have zero reserves. At the Trust's request, those properties have been included herein for the Trust's internal inventory purposes.

The estimated future revenue to be derived from the production and sale of the net proved developed producing reserves, as of December 31, 2023, of the properties evaluated using the guidelines established by the SEC is summarized as follows, expressed in thousands of dollars (M\$):

| | Proved Developed Producing (M\$) |
|-----------------------------|---|
| Future Gross Revenue | 592,794 |
| Production Taxes | 30,036 |
| Ad Valorem Taxes | 22,707 |
| Transportation Expenses | 15,769 |
| Future Net Revenue | 524,282 |
| Present Worth at 10 Percent | 257,550 |

Note: Future income taxes have not been taken into account in the preparation of these estimates.

In our opinion, the information relating to estimated proved developed producing reserves, estimated future net revenue from proved developed producing reserves, and present worth of estimated future net revenue from proved developed producing reserves of oil, condensate, NGL, and gas contained in this report has been prepared in accordance with Paragraphs 932-235-50-4, 932-235-50-6, 932-235-50-7, 932-235-50-9, 932-235-50-30, and 932-235-50-31(a), (b), and (e) of the Accounting Standards Update 932-235-50, *Extractive Industries – Oil and Gas (Topic 932): Oil and Gas Reserve Estimation and Disclosures* (January 2010) of the FASB and Rules 4–10(a) (1)–(32) of Regulation S–X and Rules 302(b), 1201, and 1202(a) (1), (2), (3), (4), (8)(i), (ii), and (v)–(x) of Regulation S–K of the SEC; provided, however, that (i) future income tax expenses have not been taken into account in estimating the future net revenue and present worth values set forth herein and (ii) estimates of the proved developed producing reserves are not presented at the beginning of the year. This report does not include certain disclosures required by Item 1202 (a)(8) of Regulation S–K and is thus not to be used for inclusion in certain SEC filings.

To the extent the above-enumerated rules, regulations, and statements require determinations of an accounting or legal nature, we, as engineers, are necessarily unable to express an opinion as to whether the above-described information is in accordance therewith or sufficient therefor.

Appendix A, bound with this report, includes (1) summary projections of proved developed producing reserves and revenue by state, (2) tabulations of proved developed producing reserves and revenue by state, field, and lease, and (3) rankings of proved developed producing reserves and revenue by field and lease. Appendix B, separately bound, includes projections of proved developed producing reserves and revenue by state, field, and lease.

SUMMARY and CONCLUSIONS

The Trust has represented that it holds royalty interests in certain properties located in Florida, Louisiana, Mississippi, New Mexico, Oklahoma, and Texas evaluated herein. The estimated net proved developed producing reserves, as of December 31, 2023, of the properties evaluated herein are summarized as follows, expressed in thousands of barrels (Mbbl) and millions of cubic feet (MMcf):

| | Net Reserves | | | |
|----------------------------|--|-----------------------|-------------------------------------|---------------------------------|
| | Oil and Condensate (Mbbl) | NGL (Mbbl) | Total Liquids (Mbbl) | Sales Gas (MMcf) |
| Proved Developed Producing | 5,314 | 2,601 | 7,915 | 46,399 |

The estimated future revenue attributable to the Trust's interest in the proved developed producing reserves, as of December 31, 2023, of the properties evaluated using the guidelines established by the SEC is summarized as follows, expressed in thousands of dollars (M\$):

| | Proved Developed Producing (M\$) |
|-----------------------------|---|
| Future Gross Revenue | 592,794 |
| Production Taxes | 30,036 |
| Ad Valorem Taxes | 22,707 |
| Transportation Expenses | 15,769 |
| Future Net Revenue | 524,282 |
| Present Worth at 10 Percent | 257,550 |

Note: Future income taxes have not been taken into account in the preparation of these estimates.

While the oil and gas industry may be subject to regulatory changes from time to time that could affect an industry participant's ability to recover its reserves, we are not aware of any such governmental actions which would restrict the recovery of the December 31, 2023, estimated reserves.

DEGOLYER AND MACNAUGHTON

DeGolyer and MacNaughton is an independent petroleum engineering consulting firm that has been providing petroleum consulting services throughout the world since 1936. Our fees were not contingent on the results of our evaluation. This report has been prepared at the request of the Trust. DeGolyer and MacNaughton has used all assumptions, procedures, data, and methods that it considers necessary to prepare this report.

Submitted,

DeGOLYER and MacNAUGHTON
Texas Registered Engineering Firm F-716

PROJECTION OF ESTIMATED PROVED DEVELOPED PRODUCING PRODUCTION AND REVENUE
AS OF DECEMBER 31, 2023
FROM CERTAIN PROPERTIES WITH ROYALTY INTERESTS ATTRIBUTABLE TO
SABINE ROYALTY TRUST

Reserve Category: DEVELOPED PRODUCING
State: OKLAHOMA
Field: CHITWOOD
Lease: SILVER STRATTON 2-6-31-3

County: GRADY

ClientFieldCode: 500339-007
Operator: CONTINENTAL RESOURCES INC
Zone: WOODFORD

Table with columns: Year Ending Dec 31, Completions, Gross Oil and Cond Production (bbl), Gross NGL Production (bbl), Gross Separator Gas Production (Mcf), Gross Sales Gas Production (Mcf), Net Oil and Cond Production (bbl), Net NGL Production (bbl), Net Total Liquids Production (bbl), Net Sales Gas Production (Mcf). Rows include years 2024-2043 and Subtotal/Total/Cumulative/Ultimate.

Table with columns: Year Ending Dec 31, Oil and Cond Prices (\$/bbl), Natural Gas Liquids Prices (\$/bbl), Total Liquids Prices (\$/bbl), Gas Prices (\$/Mcf), Future Gross Revenue Oil and Cond (\$), Future Gross Revenue NGL (\$), Future Gross Revenue Total Liquids (\$), Future Gross Revenue Gas (\$), Future Gross Revenue Total (\$). Rows include years 2024-2043 and Subtotal/Total.

Table with columns: Year Ending Dec 31, Production Taxes (\$), Ad Valorem Taxes (\$), Transportation Expenses (\$), Future Net Revenue Annual (\$), Future Net Revenue Cumulative (\$), Present Worth at 10 Percent Annual (\$), Present Worth at 10 Percent Cumulative (\$), Gross Completions Oil, Gross Completions Gas. Rows include years 2024-2043 and Subtotal/Total. Includes interest profile and present worth profile.

These data accompany the report of DeGolyer and MacNaughton and are subject to its specific conditions.
